

Objectives

The project has five main objectives.

Objective 1 — Understand Airbnb Market Characteristics

Analyse:

- Price distribution across cities
- Property availability
- Room types
- Customer ratings
- Host characteristics

Business question:

Which Airbnb markets are expensive, affordable, or highly competitive?

Objective 2 — Identify Airbnb Price Drivers

Develop a machine learning model to determine:

What factors influence Airbnb prices?

Potential factors:

- City
- Property type
- Number of bedrooms
- Accommodation capacity
- Amenities
- Reviews
- Host experience

Objective 3 — Forecast Demand

Estimate traveller demand using review activity as a demand indicator.

Business question:

- Which cities and periods experience the highest traveller activity?

Objective 4 — Evaluate Customer Experience

Analyse guest feedback patterns through:

- Review score analysis
- Relationship between customer satisfaction and listing characteristics

Objective 5 — Identify Investment Opportunities

Create a revenue opportunity model to recommend:

- Attractive cities
- Profitable property types
- High-value locations

Business question:

Where should investors allocate their capital?
