

Data Sources

The project uses two main Airbnb datasets.

Listings Dataset

Contains over **279,000 listings** from ten cities.

Variables include:

Category	Variable name
Listing information	Listing_id
Host information	Name Host ID Host since Host location Host response time Host response rate Host acceptance rate Host is superhost Host total listings count Host has profile pic Host identity verified Instant bookable
Location	City Neighbourhood District Latitude Longitude
Property characteristics	Property_type Room_type Bedrooms Accommodates Amenities
Pricing	Price
Reviews	Review_scores_rating Review_scores_accuracy Review_scores_cleanliness

	Review_scores_checkin Review_scores_communication Review_scores_location Review_scores_value
Duration	Maximum_nights, Minimum nights

Reviews Dataset

Contains millions of review records used for demand analysis:

Variables include:

Variable	Purpose
Listing ID	Connect reviews with listings
Review date	Analyse seasonality
Review ID	Unique review identifier
Reviewer ID	User activity analysis

Data Dictionary

The provided data dictionary explains every variable, ensuring consistent interpretation throughout the project.
